

## OPERACIONES DE GEOPROCESAMIENTO

| Operación   | Descripción  | ARCGIS<br>(Toolbox)   |
|---|--|---|
| <b>DISOLVER</b><br>Se fusionan figuras que comparten un mismo atributo  |     |  ArcToolbox<br>└ Data Management Tools<br>└ Generalization<br>└ Dissolve |
| <b>MERGE</b><br>Dos capas del mismo tipo se agrupan en una sola capa (útil para empalmes)   |    |  Data Management Tools<br>└ General<br>└ Merge                           |
| <b>CLIP</b><br>Se limita la información de una capa a un área específica  |    |  ArcToolbox<br>└ Analysis Tools<br>└ Extract<br>└ Clip                   |
| <b>ERASE</b><br>Una capa le borra su área a otra  |    |  Analysis Tools<br>└ Overlay<br>└ Erase                                  |
| <b>INTERSECT</b><br>Se cruzan dos capas generando sólo las áreas comunes  |   |  ArcToolbox<br>└ Analysis Tools<br>└ Overlay<br>└ Intersect            |
| <b>UNION</b><br>Se cruzan dos capas manteniendo los elementos comunes tanto no comunes  |  |  ArcToolbox<br>└ Analysis Tools<br>└ Overlay<br>└ Union                |
| <b>IDENTITY</b><br>Se cruzan dos capas y las porciones comunes en la capa de entrada adquieren los atributos de la capa que se sobreponen |   |  Analysis Tools<br>└ Overlay<br>└ Identity                             |
| <b>SPATIAL JOIN</b><br>Se pegan columnas de una tabla otra según la relación espacial entre las dos capas                                 |  |  ArcToolbox<br>└ Analysis Tools<br>└ Overlay<br>└ Spatial Join         |
